For the BBC, it was through free radios, top 40s, and an ever-growing, edgy line-up of DJs (all while maintaining quality, standards and an entertaining atmosphere.) Similarly, many a radio broadcaster has found success by staying current with the trends and demands of the times. Find out how webcasters can make radio successful, even in a "catch up" world. An enjoyable, informative, and detailed-but-slightly-less-than-straight-forward-in-their-focus-on-metrics, How Do Webcasters Get People to Stay Tuned? details how the current climate of listeners can be met by webcasters. This book serves as a great overview of the current times for radio broadcasters. As far as we can tell, in addition to the system requirements, you need the following: Installation: Able to download and run the program. Of course, I'll also assume that the program can be run from the Administrator account, as well as the Unity desktop. The first thing I did was download and install Background Terminal. For those of you who are interested, here is the link to download the program: Next, we downloaded and installed the BGT Display Manager. Now, as stated in the program's description, this is the program that "binds [BGT] to your desktop" or something along those lines. However, due to the fact that the program itself does not offer a link to the GUI, we did go ahead and install it anyway. For those of you who are interested, here is the link to download and install the program: All of this took a total of about five minutes. However, I wouldn't recommend actually doing these steps by hand as most modern OS's should have this covered by default. Now, we can go ahead and test out the background terminal overlay. To do this, I went to the Screenshot tool and used Alt+PrtSc+R to take a picture of my desktop, which I then uploaded here: Now, as you can see, the background terminal overlay is being used. It is indeed rather simple, though it does require a bit of interaction and customization, which is pretty much the way we all work. So, if you want the terminal to appear on the desktop, make sure that you have this checked. Now, if you want to change the color and font, click on this icon: Now, the options will be presented to you. So, basically, it is color and font based. You can either choose one or the other, or you can keep them both. If you choose color, then you have the options of HEX colors (you can select the color as HEX, RGB, or CMYK) and of course you can also choose the font. So, we can go ahead and try changing the color: Here, we can see the font color changing. All of this is done via the hex code. So, all we have to do now is go back to the terminal window and type in the code we just came up with. In my case, this is #A9CA99, which results
