Considering the time he was given, it's probably best if he stops now and tries to figure this out for himself. That said, I'd like to try something akin to Kamada's designs for Caliborn's mechs in the anime (Wahabbi's mode as portrayed in the Kickstarter pitch) where the pallet is based on the foldable robot the mech is made up of, and where the designs shift in different modes of operation. As for Railgun, we can basically just recycle the version in the material for this series, right? Also: Cannibalizing stuff we've seen before and making a different outfit out of it is kind of formulaic, now, is it not? Well, yeah, but as much as we'd like to use the brilliant original design, you know Kamada can just do that design to his heart's content, right? I mean, how many times do I have to say it? Kamada has no problem deviating from classic designs in Kamen Rider. He's gonna design new stuff for the Power Rangers, he's gonna design new stuff for Kamen Rider, and when it comes to the other Kamen Rider designs he's made, he's also going to create new material, right? Hence the reference to things from modern Kamen Rider. As for Kamen Rider Gaim, well, he started off as a "supporting character" in Kamen Rider Agito, then became a "series regular" in Kamen Rider Amazons, and now he's one of the main leads in Kamen Rider G
